Message

Shoviv Software, a leading provider of innovative data recovery and email migration solutions, today announced the release of the highly anticipated updated version of [Shoviv PST Repair](#). This latest iteration brings advanced repair capabilities, a redesigned user interface, and robust security upgrades designed to simplify Outlook PST recovery for both enterprise IT administrators and individual users. As PST corruption continues to be a persistent hurdle for organizations relying on Microsoft Outlook, Shoviv has overhauled its core recovery engine. The updated software now handles severely corrupted, oversized, and encrypted PST files with unprecedented speed and accuracy, ensuring zero data loss during the recovery process. Key Enhancements in the New Version:

Enhanced GUI for a Smoother Repair Process: The user interface has been completely redesigned with a modern, intuitive layout. The streamlined workflow minimizes the technical learning curve, allowing users to initiate and complete the PST repair and export process in just a few clicks.

Office 365 Login via Modern Authentication (EWS): Prioritizing data security, the updated tool now supports Modern Authentication via Exchange Web Services (EWS) for Office 365 (Microsoft 365). This allows users to securely export recovered PST data directly to Cloud mailboxes using secure, token-based authentication, bypassing the need for basic password credentials.

On-Premises Exchange Access via EWS: Extending its versatility for hybrid and local enterprise environments, the software now seamlessly connects to On-Premises Exchange servers using EWS. This ensures direct, secure migration of restored data to live Exchange mailboxes. "Data integrity and security are at the forefront of what we do," said the Product Manager at Shoviv Software. "With this update, we aren't just fixing broken PST files; we are modernizing how administrators handle that data by integrating industry-standard Modern Authentication and ensuring a frictionless user experience."

Availability The updated version of Shoviv PST Repair is compatible with all major Windows OS versions and supports PST files generated by any Microsoft Outlook version (including 2021, 2019, and older). A free evaluation version is available for download on the official Shoviv website, allowing users to preview recoverable items before purchasing a license.

About Shoviv Software Shoviv Software is a trusted global developer of email migration, data recovery, and backup management utilities.
