Summary

NewsBox Unveils Major Platform Upgrade: New Newsroom Ecosystem, AI-Powered Discovery, and Expanded Intelligence Tools for Modern News Monitoring

Message

The latest release deepens NewsBox's position as a connected workspace for news intelligence, press distribution, and creator-driven publishing. Baltimore, MD – July 24, 2026 – NewsBox today announced a broad set of platform

improvements designed to help professionals, creators, communicators, and agencies monitor, share, and act on the news that matters to them. The update introduces a complete press release submission and distribution workflow, advances AI-assisted discovery and translation, deeper company and market intelligence, and a new set of analytics and operational tools for the NewsBox team.

"NewsBox is becoming the operating layer for news intelligence," said Gary C. Pick, founder of Connectus. "These improvements reflect how our users actually work – they need to track companies, follow topics, distribute their own stories, and understand the signal in the noise. We're building the tools that make that possible from a single platform."

A Complete Newsroom for Press Release Submission and Distribution

NewsBox has launched a full newsroom ecosystem that allows organizations to submit, review, and distribute press releases directly through the platform. Key capabilities include:

- Paid press release submission at newsbox.com/newsroom/submit, with tiered national and regional distribution options.
- Admin review queue for editorial approval before publication.
- Automatic distribution of approved releases into NewsBox's general news feeds, clearly labeled with a "News Release" badge.
- Partner and agency inquiry workflows, including a reseller program for firms that want to offer NewsBox distribution services to their clients.
- Onboarding gate for new submitters and real-time email alerts to the NewsBox team on every submission.

Smarter Search, Discovery, and Global Readiness

Finding relevant news is now faster and more precise. NewsBox has added advanced search filters on newsbox.com/search, expanded SEO topic landing pages, and launched company profile pages that aggregate coverage and make it easier to follow organizations, tickers, and topics. For global readers, premium users can now translate articles on demand, with every AI-translated article carrying a clear "Translated using AI" disclosure label.

Premium Intelligence and Autonomous News Agents

NewsBox has extended its intelligence layer with two new capabilities:

- News Agents enable autonomous, ongoing research on user-defined topics, surfacing narrative shifts and key developments without manual searching.
- Financial Intelligence delivers SEC and market data, with premium members receiving intelligence reports as part of their daily brief.

Expanded Creator and Publisher Tooling

Creators and publishers now have more ways to build and share content on NewsBox:

- AI Content Coach and Content Intelligence help creators refine tone, style, and topic strategy.
- Publisher article submission at newsbox.com/publisher/submit-article makes it easy

for contributors to publish.

â€¢ NewsBox badge kit lets publishers and partners display verified affiliation.

Operational Transparency and Trust

The NewsBox admin team has also gained a new PM Dashboard for tracking signups, activation, weekly and monthly active users, paid conversions, cohort retention, and feature adoption. In addition, the platform now includes SEC disclaimers on article and news release pages, and recently addressed two security findings related to content access and visibility flags.

Availability

The new capabilities are available now at newsbox.com. Organizations interested in press release distribution, agency partnerships, or advertising can learn more at newsbox.com/newsroom, newsbox.com/agency-partners, and newsbox.com/advertise.

About NewsBox

NewsBox is a connected news intelligence platform that helps professionals, teams, and creators track the stories, companies, and markets that shape their work. Combining human-curated RSS feeds, AI-assisted discovery, multilingual translation, and a growing suite of publishing and distribution tools, NewsBox makes it easier to monitor the news, share insights, and turn information into action â€” all from one place.Â View more at newsbox.com
