

Advik Launches Advanced OST to PST Converter for Orphaned Files

New Delhi, India – Advik Software, a well-known provider of email migration and data recovery solutions, has officially launched its **Advanced OST to PST Converter**, a powerful tool designed to help users convert **orphaned OST files** into PST format without requiring Exchange Server or Outlook connectivity.

OST files often become inaccessible when an Exchange account is deleted, a server crashes, or an Outlook profile is removed. In such cases, users are unable to access important emails and mailbox data using Outlook's built-in options. Advik's newly launched OST to PST Converter solves this problem by allowing users to directly convert OST files into PST format with complete data integrity.

The software supports the recovery of emails, attachments, contacts, calendars, tasks, and notes while preserving the original folder structure and email properties. It works independently and does not depend on Exchange Server availability, making it ideal for orphaned and inaccessible OST files.

“Our aim with the Advanced OST to PST Converter is to help users regain access to their Outlook data even when Exchange Server is no longer available. We focused on making the tool simple, secure, and reliable for both technical and non-technical users,” said the **Product Manager at Advik Software**.

Key Features of Advik OST to PST Converter:

- Converts orphaned and inaccessible OST files
- No Exchange Server or Outlook installation required
- Supports large OST files
- Maintains original folder hierarchy
- Simple and user-friendly interface

The tool is suitable for **individual users, IT administrators, enterprises, and MSPs** who need a fast and reliable solution to recover Outlook data from OST files.

The **Advik OST to PST Converter** is now available for Windows platforms and includes a free trial version to evaluate its functionality.
